

Ever wondered which place in Bangladesh is
the farthest from any civilization or human
structure?

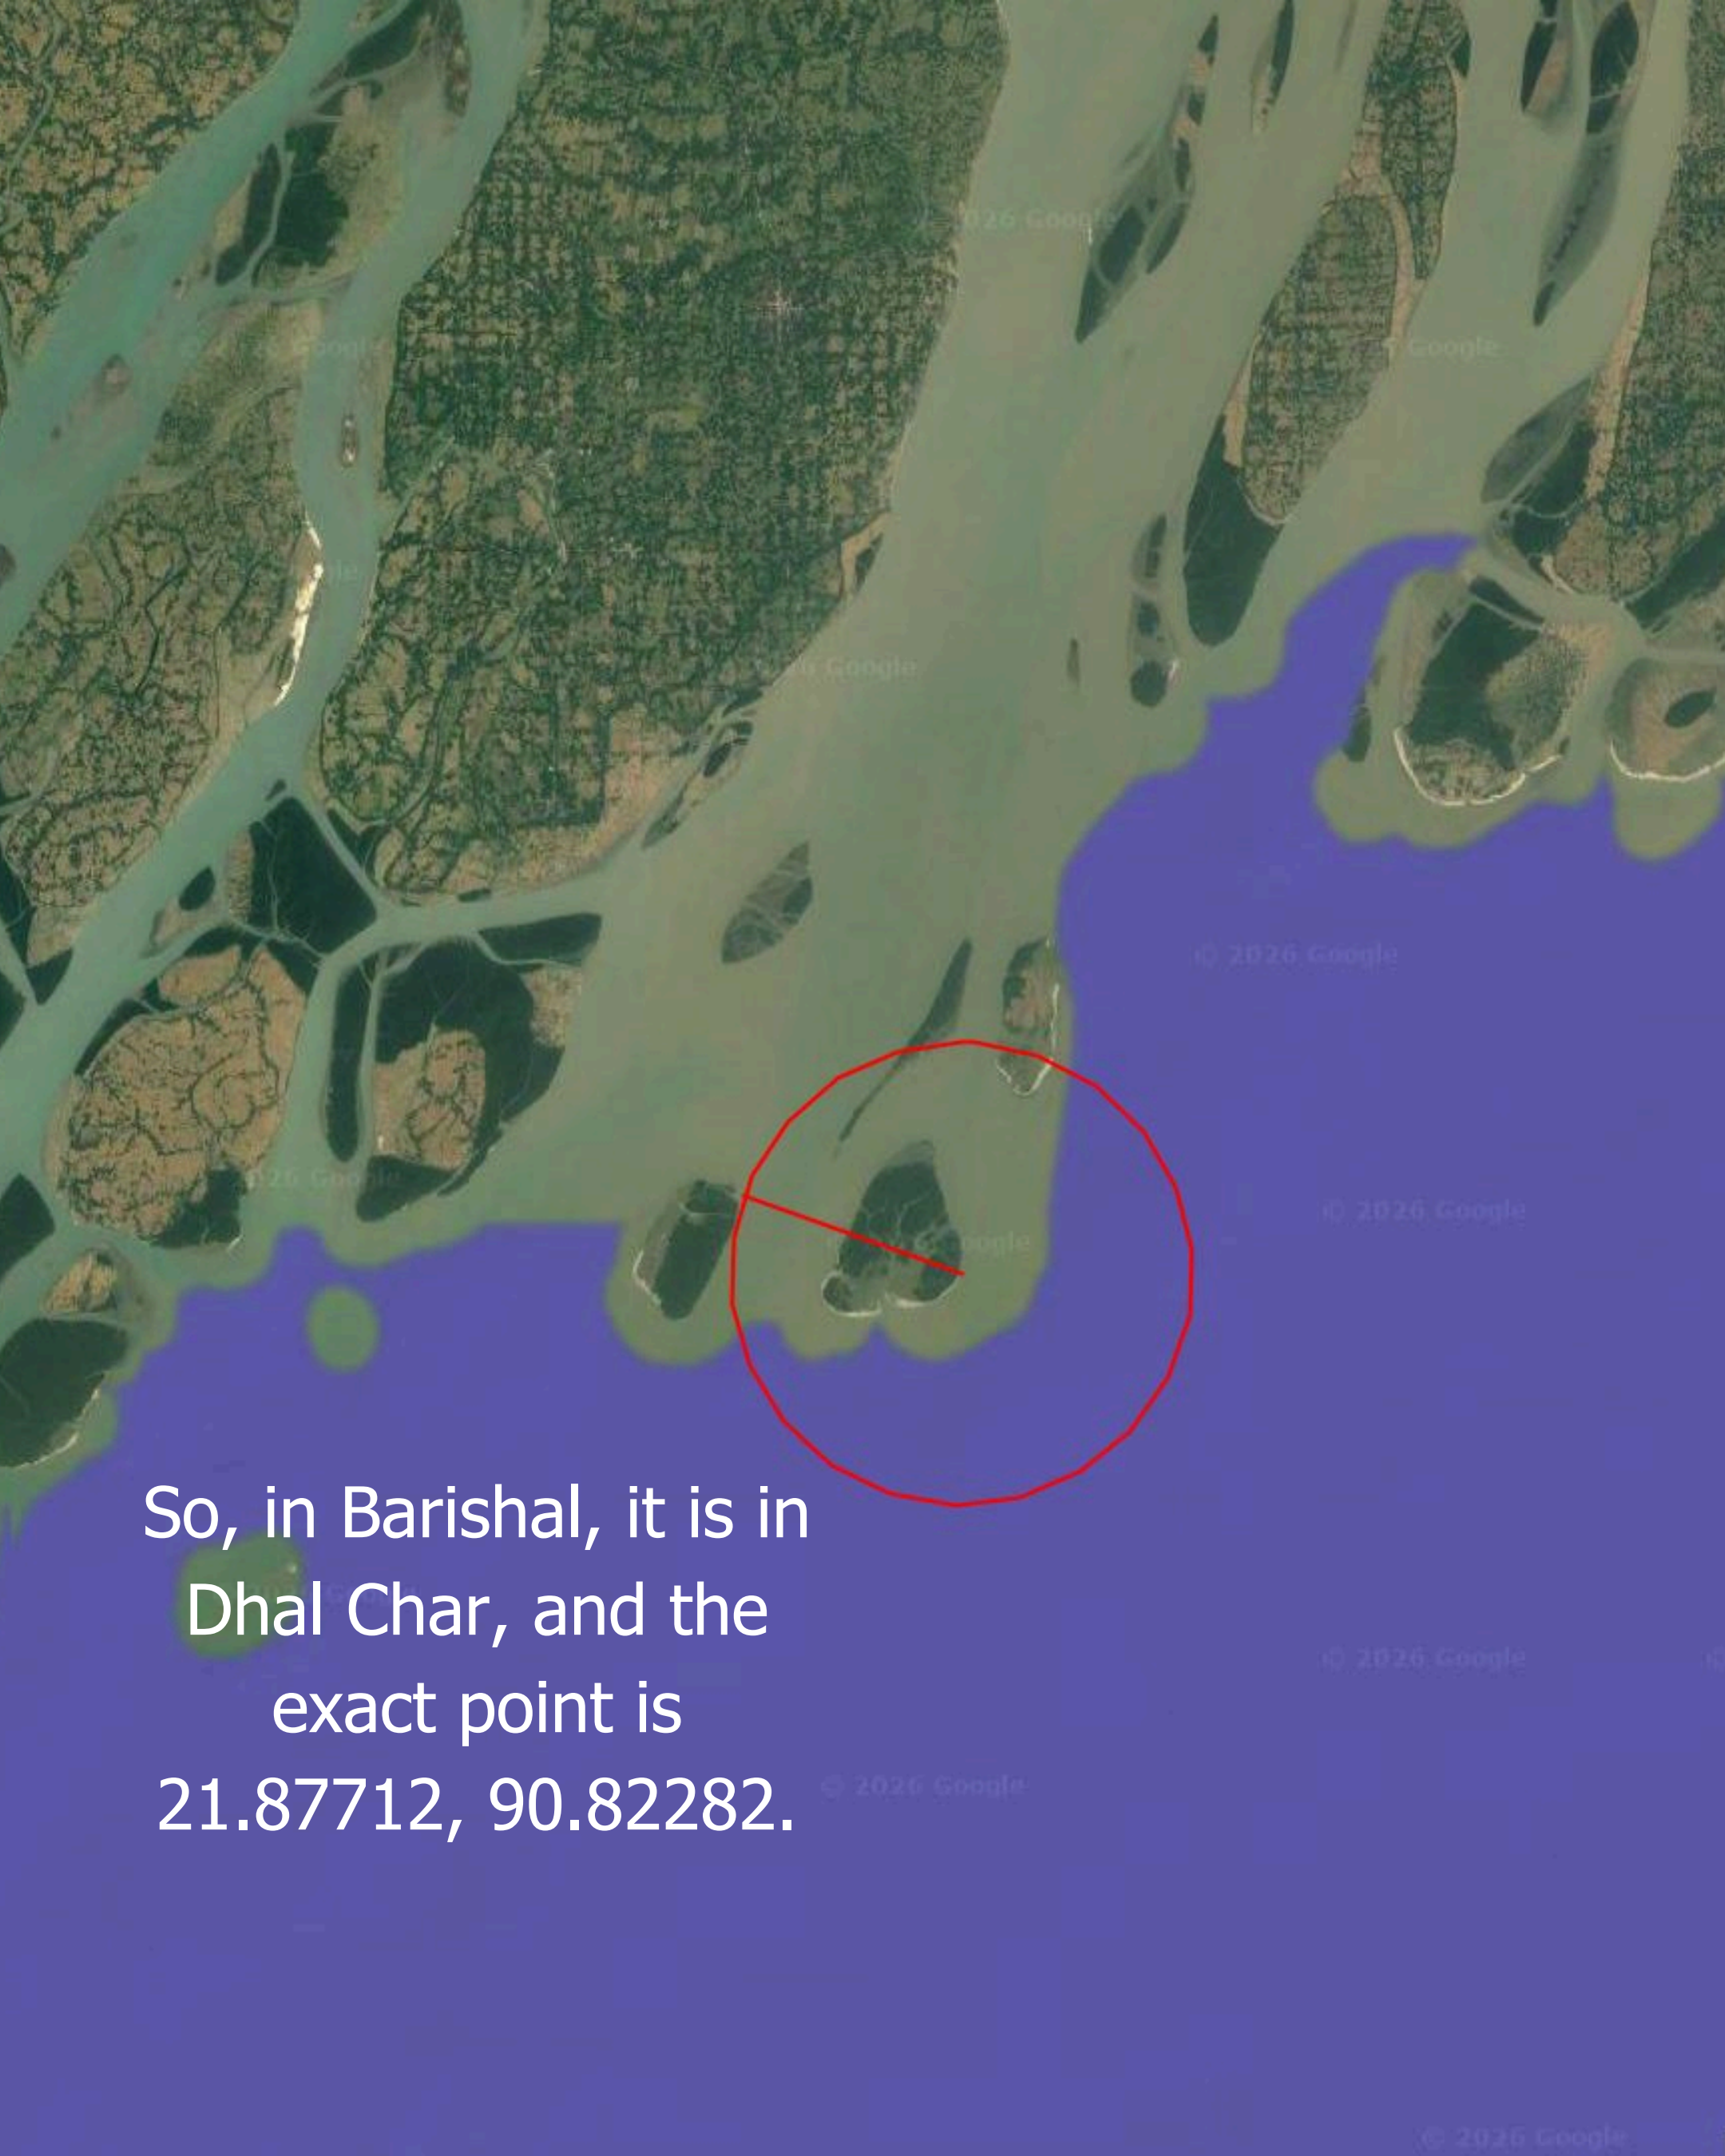

It is this point ($21^{\circ}57'41.6''\text{N}$,
 $89^{\circ}17'34.8''\text{E}$ — deep inside the
Sundarbans), which is 9,551 m
away from the nearest
structure.

Now, what if we
calculate the most
remote point in each
division individually?

So, in Barishal, it is in
Dhal Char, and the
exact point is
21.87712, 90.82282.

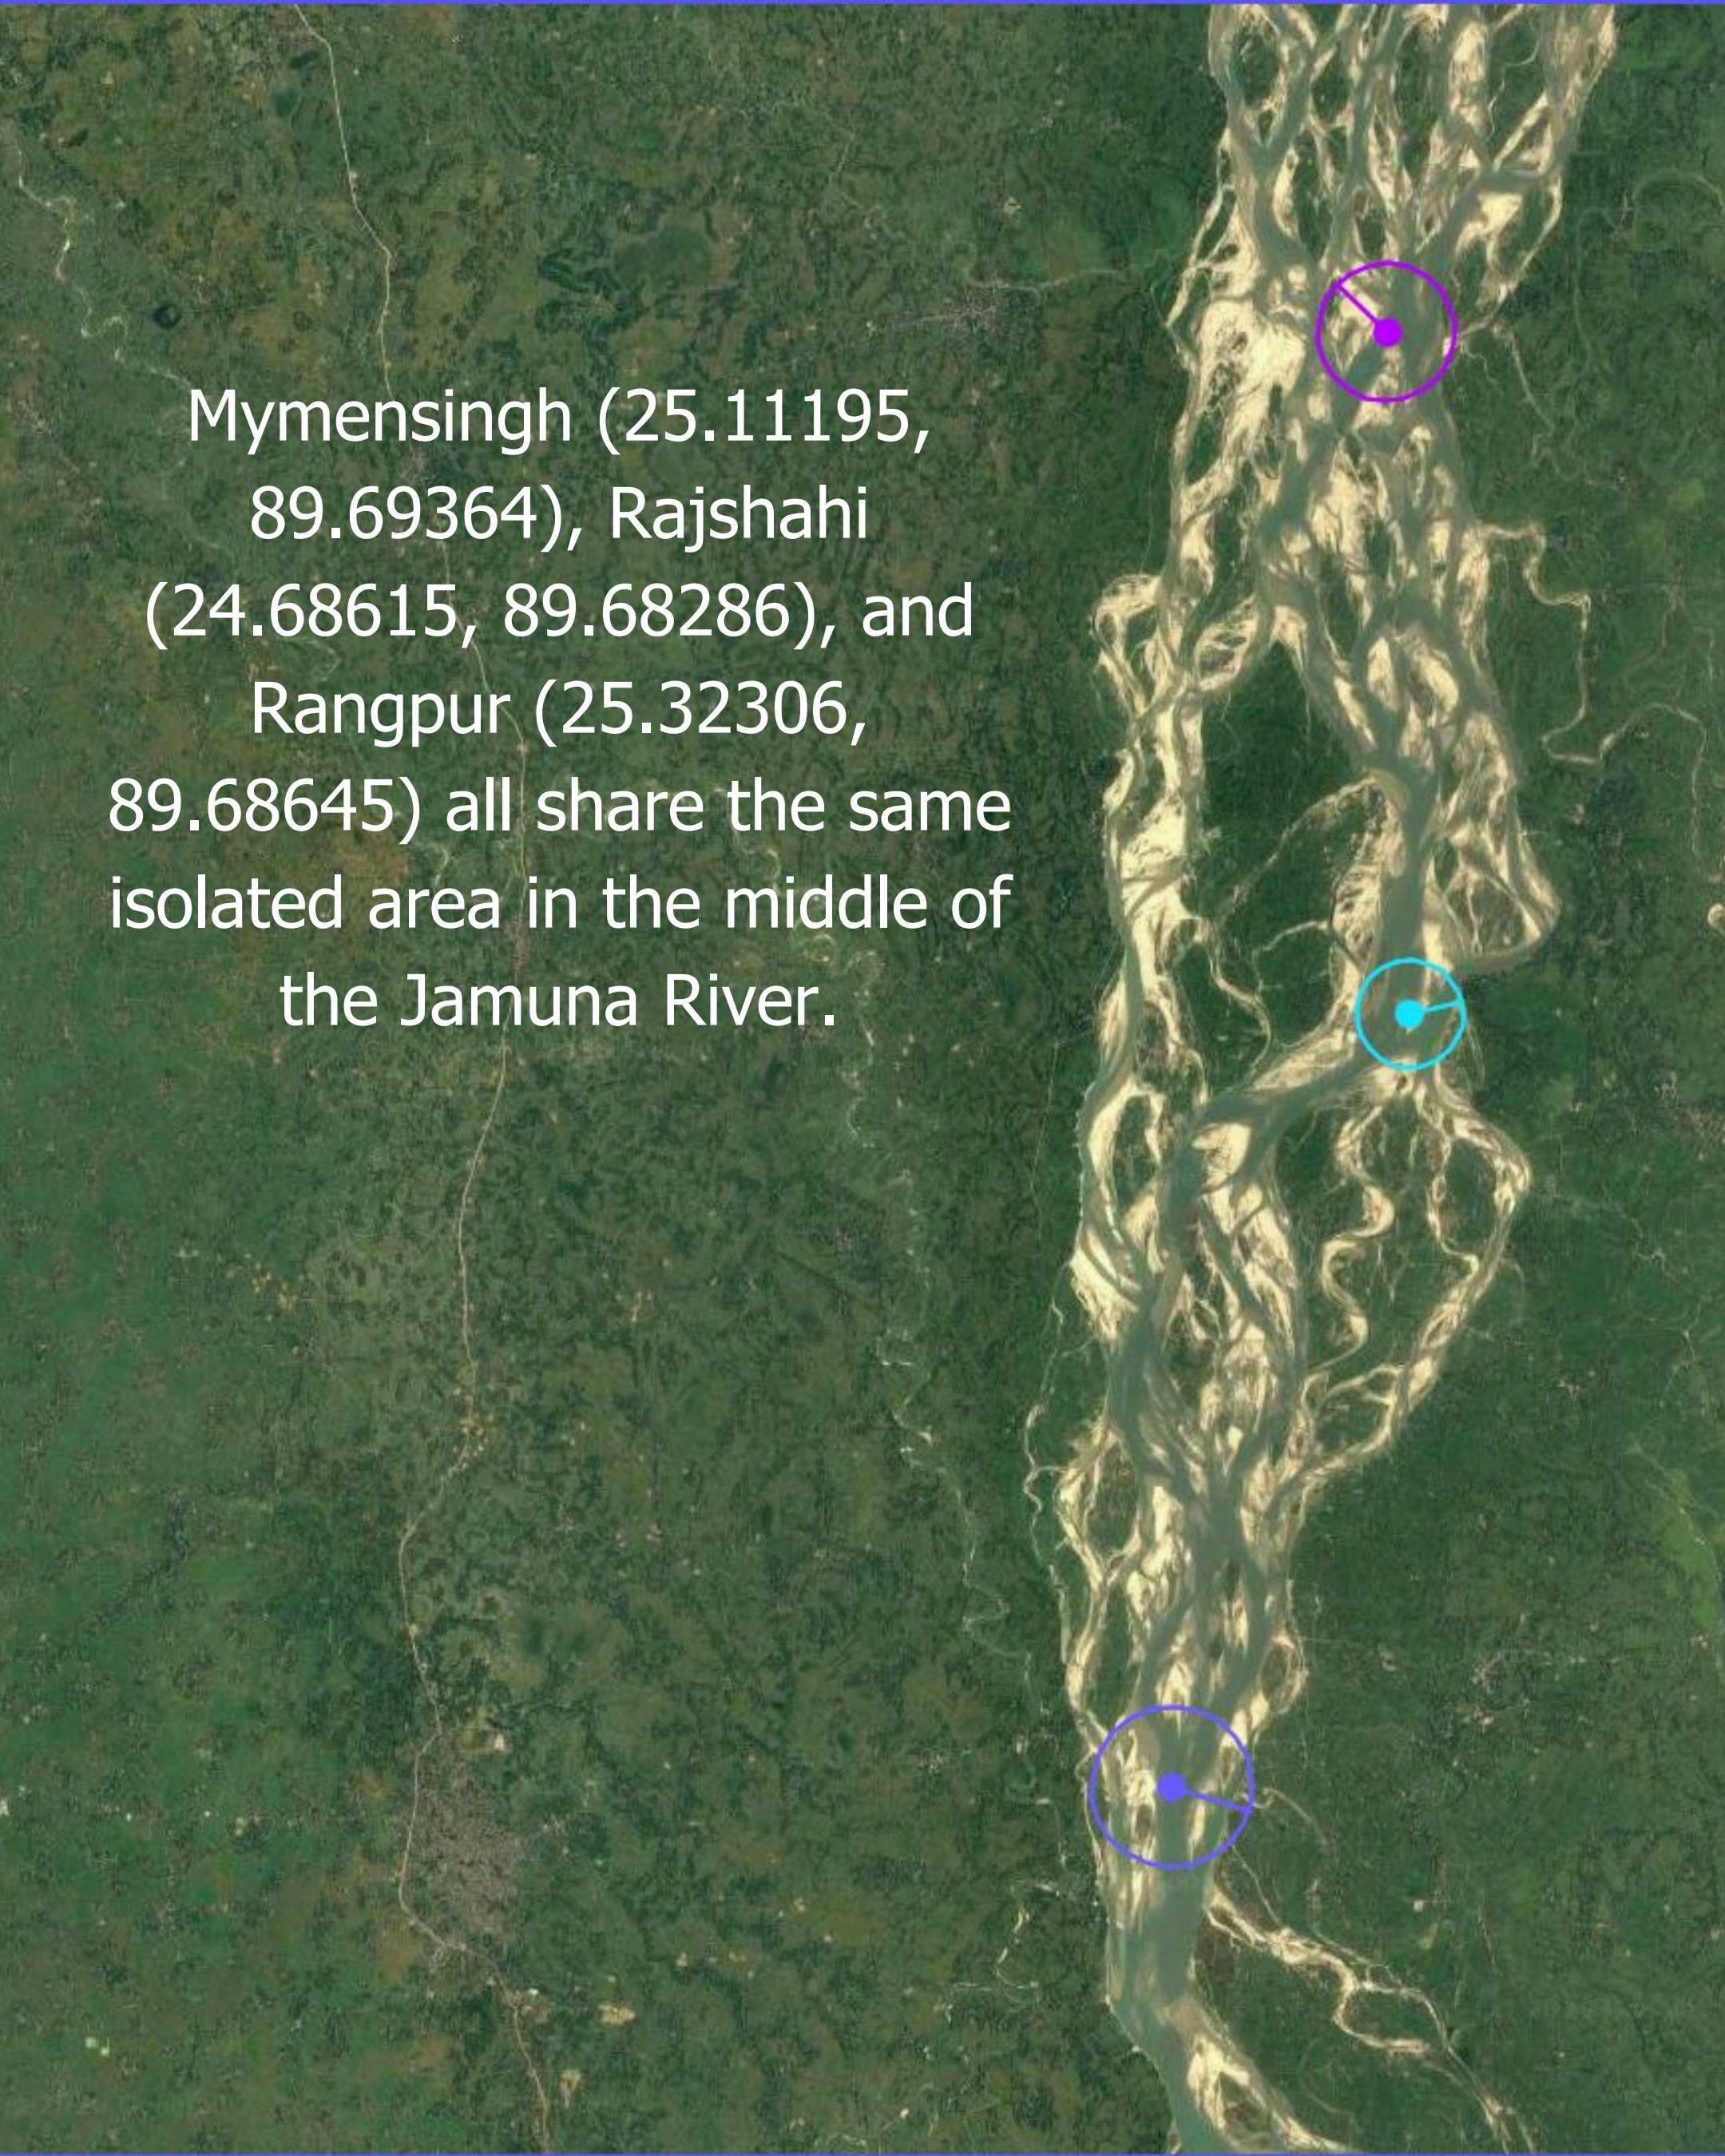

In Chittagong, Nasai
Hung (21.28603,
92.67964) is the most
isolated point.

In Dhaka, the most
isolated point is in the
Meghna River
(23.35036, 90.40510).

Mymensingh (25.11195,
89.69364), Rajshahi
(24.68615, 89.68286), and
Rangpur (25.32306,
89.68645) all share the same
isolated area in the middle of
the Jamuna River.

In Sylhet Division, it is
in Hakaluki Haor
(24.66190, 92.05441).

Workflow

Build the mask

Open Buildings V3
Country plus 30 km buffer

Filter confidence
Keep 0.65 and above

Rasterize to 100 m
Cell is 1 if a footprint hits

Export as an asset
Computed once, reused

Find the points

Distance transform
Steps to nearest built cell

Scale to metres
Square root, then times 100

Exclude bad candidates
Water, border, known gaps

Take the maximum
Nationally, then per division

Now, what if we
expand this to all 64
districts and find the
most isolated point in
each district? :)
